 AND THE AMERICAN HORTICULTURAL SOCIETY

We are closed to business on all National Holidays. The nursery is closed Saturday afternoons during July, August, January and February, and all Sundays. The Garden Center schedule is the same as above except that it will remain open all day Saturday during July and August.

The Nursery is closed daily 12 to 12:45 p.m.

Recent Awards from the Massachusetts Horticultural Society

Many years of experience have gone into the selection and production of the plants listed in this catalog. Since we are growers of perhaps the largest variety of hardy plants in the entire country, it is to our personal benefit, as well as to that of our customers, that we raise only those plants which are desirable for the homeowner.

Selection of only the best plants from our own stock for reproduction is the rule in our Propagation Department. Each year we acquire plants for trial from all over the world. Occasionally new varieties prove themselves worthy to be planted in our gardens, and we then raise and list them.

Plant hybridization is another method we are using to make our supply of plants still more attractive. Our own *Rhododendron carolinianum* PJM hybrids are now nationally recognized as a spectacular addition to horticulture. Soon to be introduced by us are the Aomi Hybrid Azaleas, which we originated. These are extremely hardy, colorful, and fragrant.

Every purchaser of plants has to rely a great deal on the faith of his or her supplier. The origin of the plant, the area where it is grown, its trueness to name and variety, its freedom from pests, disease and weeds, and its good root system are some of the hidden factors upon which the future of the plant and satisfaction of the purchaser may depend. We, at Weston Nurseries, stand behind every plant we sell, for it is to our own advantage as growers that our customers receive the best plants grown.

EVERGREENS

The interest, strength and permanence of any planting relies upon the effective use of evergreens. Together with architectural and natural features, they are the framework and refinement of a beautiful picture. Our gardens surrounding the Garden Center are a living example of the value of evergreens, showing their diversity of purpose.

EVERGREENS grow easily in good garden loam. However, such soil conditions do not always exist, and then preparation of the planting area is necessary. Any soil can be improved by the addition of peat, peat moss, compost or other organic materials.

Particular care should be taken with evergreens planted under trees. Every plant has difficulty when first placed in such a location due to dryness and shade. Several years of regular attention, particularly with regard to water, are necessary before plants can send roots deep into the ground and become established.

Evergreens will not grow in land that is poorly drained, even though such areas are dry during the summer months. Plants that cannot be easily kept weed-free and cultivated should be mulched heavily with a coarse material such as hay or wood chips.

It is generally not advisable to fertilize evergreens when planting. After they are established for about a year, any recommended fertilizer used sparingly is advisable.

When evergreens are used in a restricted area, such as in foundation plantings, they normally require an annual pruning to prevent overgrowth and to give character to the planting. This pruning is best done during spring or early in the summer to allow time for additional growth to cover any possible unsightliness of the cuts. Hedge shears usually create a formal effect while hand shears or a knife are used if one wishes to prune for a more natural effect.

BROAD-LEAVED EVERGREEN SHRUBS

The successful raising of Broad-Leaved Evergreens is perhaps the greatest challenge to the nurseryman. Our years of experience in growing and our efforts in selecting hardy strains have made it possible to offer a complete selection of plants that will thrive in our climate.

Broad-Leaved Evergreens thrive in soils rich in organic matter. They need soils that are acid and the liberal use of Grobark, peat or peat moss is advisable. Being surface-rooted, this group of plants particularly enjoys either a mulch or a ground cover such as Pachysandra or Vinca to keep the soil cool and moist.

Rhododendron

This is perhaps the most exciting group of plants for our gardens. We take great pride in growing the large variety listed below. Many years of trial, hybridizing and selection have gone into this list. The new Rhododendron carolinianum hybrids are noteworthy additions in that they can be used in smaller areas such as foundation plantings and rockeries. Rhododendron carolinianum PJM hybrids are a new, extraordinary variety that is getting national recognition for its exceptional qualities. These hybrids were originated by us in 1943, and one of the parent plants is an unnamed species sent to us by missionaries from China.

**DECIDUOUS SHADE
AND
ORNAMENTAL TREES**

Our trees are all periodically transplanted and root-pruned to develop vigorous root systems. Thus the shock of transplanting to home grounds is minimized and more immediate and rapid growth is assured our customers.

Good soil preparation and occasional THOROUGH watering during the first few growing seasons are advisable.

All shade and ornamental trees, except where otherwise noted, are sold 'B & B', that is dug with a ball of earth and burlapped. We have learned from many years of experience that trees moved B & B transplant more readily at almost any time of year. However, when trees are dormant some varieties can be moved successfully without a ball of earth just by protecting the roots with suitable packing materials. If bare rooted trees are desired, a price reduction of 20% will be allowed.

The planting of shade and ornamental trees should receive top priority in the development of any landscape plan. Their beauty and effectiveness increase as they mature, and every year of growth brings them closer to their ultimate usefulness.

Although the planting of large specimens may often be necessary to achieve an immediate effect, we highly recommend planting of medium-sized trees that can be planted even by the home-owner. Such trees develop rapidly with a minimum of care and soon become a valuable asset to the home.

DECIDUOUS ORNAMENTAL SHRUBS

There is no other group of plants that serves as many varied uses as do the Deciduous Ornamental Shrubs. Beautiful and fragrant flowers; foliage of many textures and colors, fruit for beauty and food for birds; and interesting and beautiful characteristics of growth are some of their desirable features.

We attempt to limit our production to the best and most desirable varieties, but, with the constant addition of new hybrids and valuable selections, we find ourselves yearly adding to this list of desirable plants.

All shrubs listed are priced B & B, that is, dug with a ball of earth and burlapped, except where otherwise specified. During early spring and late fall many varieties of shrubs can be moved without a ball of earth (bare rooted) and the shrubs protected with suitable packing material. If bare rooted shrubs are desired, a price reduction of 20% will be allowed on five or more of one variety.

Azaleas

Azaleas are perhaps the most rewarding of plants to raise. The great variety listed on the following pages is all grown in our nursery in Hopkinton. We are continually trying out and hybridizing new varieties, and our standard varieties are grown from stock plants selected for exceptional qualities.

The culture of Azaleas follows the requirements of Broad-leaved Evergreens: acid soil, rich in humus, and full sun to partial shade.

Viburnum

The Viburnum family is perhaps the most aristocratic of hardy shrubs. Their form and character are unsurpassed as they become more beautiful with age. Viburnums do not require pruning and they are resistant to practically all diseases and insects.

The flowering forms such as *Viburnum carlesi* and *Viburnum tomentosum* warrant special attention in the horicultural world, and the fruiting varieties are unsurpassed for brilliance in the fall plus being an attractive source of food for birds.

VINES AND CLIMBING PLANTS

The average garden planting can hardly be complete if it lacks the finishing touch of a vine to enhance some architectural feature. Vines can also be planted for screening purposes to provide privacy or to cover unsightly areas. Their rapid growth and ornamental value of foliage, fruit or flowers make them worthy of more extensive use.

PERENNIALS AND

ROCK GARDEN PLANTS

Our perennial gardens are now all located in Hopkinton. The Garden Center is the headquarters for this department, and several acres of land on, and adjacent to, the Garden Center are devoted to the raising of the many varieties listed on the following pages.

Our plants are field-grown, and consequently have vigorous root systems, which assure successful transplanting.

The plants are 60c. each, 3 of one variety \$1.50, 10 of one variety \$4.50, unless otherwise marked. 5 or more of one variety may be purchased at the 10 rate.

The asterisk (*) indicates varieties particularly well adapted for the Rock Garden.

The ultimate height of the plant is given in feet and inches.

Garden Chrysanthemums

A great deal of pleasure in gardening can be derived from the growing of chrysanthemums. The huge bouquet of flowers that last so long on every plant is rewarding for the small effort required in pinching the new growth until the middle of July and the occasional watering, feeding and dusting.

We recommend May and June planting for best results, but chrysanthemums may be transplanted at any time after this period. Flowering plants are potted in the fall and are available at special prices.

MNA TURF-O-GANIC LAWN FOOD. See Page 90.

SWIFT LAWN PRODUCTS.

VITOGRO CRABGRASS PREVENTOR. Applied in early spring, it kills at least 90% of crabgrass seedlings as they germinate. Harmless to plants, pets, and people. Non-Poisonous.

Bag (covers 3,000 square feet).....\$9.65.

VITOGRO LAWN WEEDER AND FEEDER. Contains 2-4-D and 2-4-D, 5-T. Kills broad-leaved weeds and supplies quick "pick-up" for all grasses.

Bag (covers 5,000 square feet).....\$5.85.

Soil Conditioners and Mulches

GROBARK. A composted bark product that is 100% organic. Excellent for incorporating into the soil at time of planting. Particularly suitable for mulching because it will not blow away, allows water to penetrate without washing away, and retains a lovely dark loam color. Available in two-bushel bags.

\$2.85 a bag; 10 bags or more, \$2.70 each.

HYPER-PEAT. A blend of Hyper-Humus and Peat Moss which provides an excellent nutritious soil conditioner.

50 lbs.....\$2.49; 100 lbs.....\$4.49.

PEAT MOSS. Clean, finely-ground, imported sphagnum peat moss.

6-cubic-foot bales...\$4.25 each; 7½-cubic-foot bales.....\$5.50 each.

WOOD CHIPS. The best material for mulching. Its coarseness allows water penetration, but does not give an attractive appearance until weathered for several years. Recommended particularly for out-of-the-way plantings. 2-bushel bags.....\$1.75 each.

Prices quoted on request for larger quantities.

Many of our customers are purchasing Weston Nurseries Gift Certificates as gifts for their friends. These Certificates can be purchased in any amount and are redeemable in plants or merchandise when presented at either our Nurseries or Garden Center.

Let one of our Gift Certificates simplify your giving on Mother's Day, Father's Day, Birthdays, Christmas, or any other giving occasion. Here is a gift easy to make but boundless in colorful beauty and the joy it bestows on the recipient.

Bulbs

We carry a full line of top-quality, imported Holland bulbs early in September. Our bulb list showing varieties, description and price will be available upon request this fall. Plan early for your bulb needs, as early planting produces most satisfactory results.

Fireplace Wood

During the winter months we can furnish FIREPLACE WOOD.

We are closed to business on all National Holidays.

The Nursery is closed Saturday afternoons during July, August, January and February, and all Sundays. Closed daily 12 to 12:45 p.m. for lunch. The Garden Center Schedule is the same as above except that it will remain open all day Saturday during July and August and is not closed during lunch.

This seal of the Massachusetts Nurserymen's Association is displayed by a large number of nurserymen and qualified plantsmen in our state whose livelihood is dependent upon the growing and sale of plants.

The Association works for the education and furtherance of good horticultural practices through television programs, the sponsorship of educational programs for the industry, cooperation with the University of Massachusetts in research and educational programs and prizes for the annual Fall Flower Show at Amherst.

The Massachusetts Nurserymen's Association has devoted several years of study and research in developing fertilizer and lawn seed for New England conditions. The quality of plants carried by the members is reflected in these other products, which are available only through this membership. Look for, and use, our MNA Fertilizers (Country Gardener, Plant-O-Ganic, Turf-O-Ganic) and MNA Lawn Seed (Pro-Turf and Mass-Turf).

We recommend that home gardeners join the

MASSACHUSETTS HORTICULTURAL SOCIETY

For more than a century devoted to the improvement of gardening and the spreading of knowledge about the care and cultivation of trees, shrubs, fruits, flowers and vegetables.

Membership makes available the use of every important book on gardening from the Society's library, admission to shows, a preview of the Spring Flower Show, lectures, the Society's publication "Horticulture" and regular use of the "Tell-U-How" and "Tell-U-Where" services in gardening.

CONDITIONS OF SALE

IT is to our own interest to see that only good and correctly-labeled plants leave the Nursery, but we give *no guaranty*, express or implied, as to description, growth and success of any stock we sell, for it depends on correct planting, proper soil, weather conditions, and the general care of the plants.

We accept all orders upon the condition that they shall be void should injury befall the stock from frost, fire, hailstorm, or other causes over which we have no control. All orders are subject to the approval of the management. Orders not claimed within ten days of specified date will be considered cancelled, nor will we be responsible for them.

Any errors made by us will be gladly rectified if notice is given within ten days after receiving the stock. If any plants are found to be misnamed, we will replace them the next planting season. Liability in all instances is limited to the purchase price.

We sell five or more plants of the *same variety* at the rate of ten.

All parcel post, express or freight charges are paid by the purchaser. On orders packed for shipment there is a small additional charge for packing, at cost. (See order blank facing page 48).

Prices are subject to change without notice.

We reserve the right to make an additional charge for specimen plants selected in the field.

A certificate of State and Federal inspection for freedom from injurious insects or disease on our plants is available with every order.

MEMORANDA

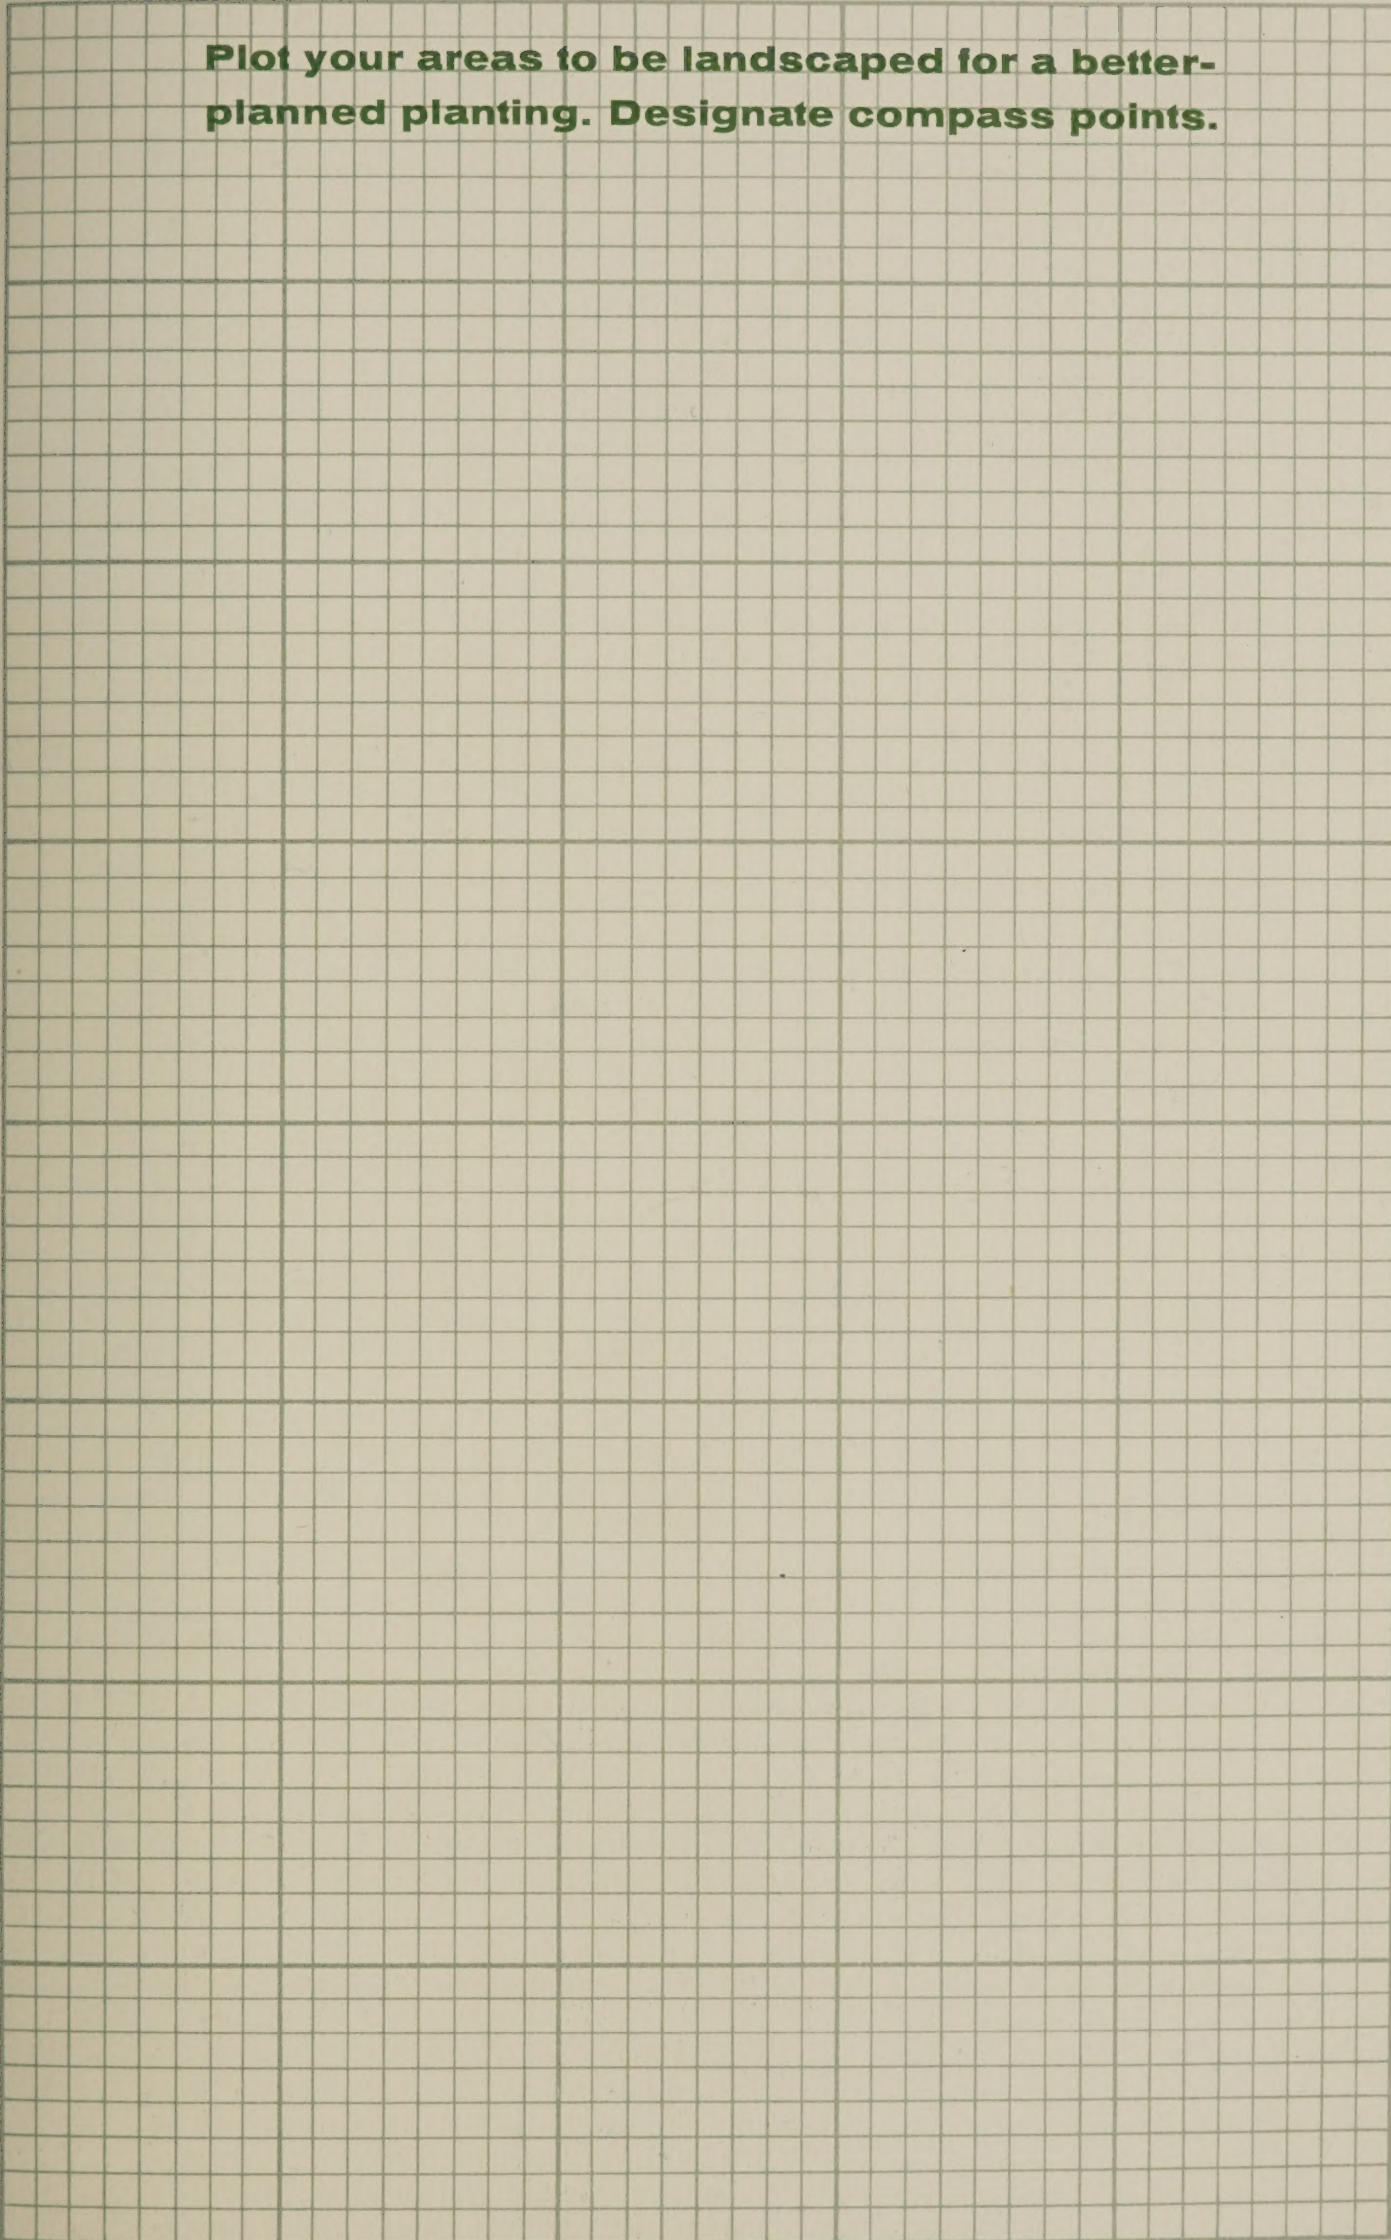

MEMORANDA

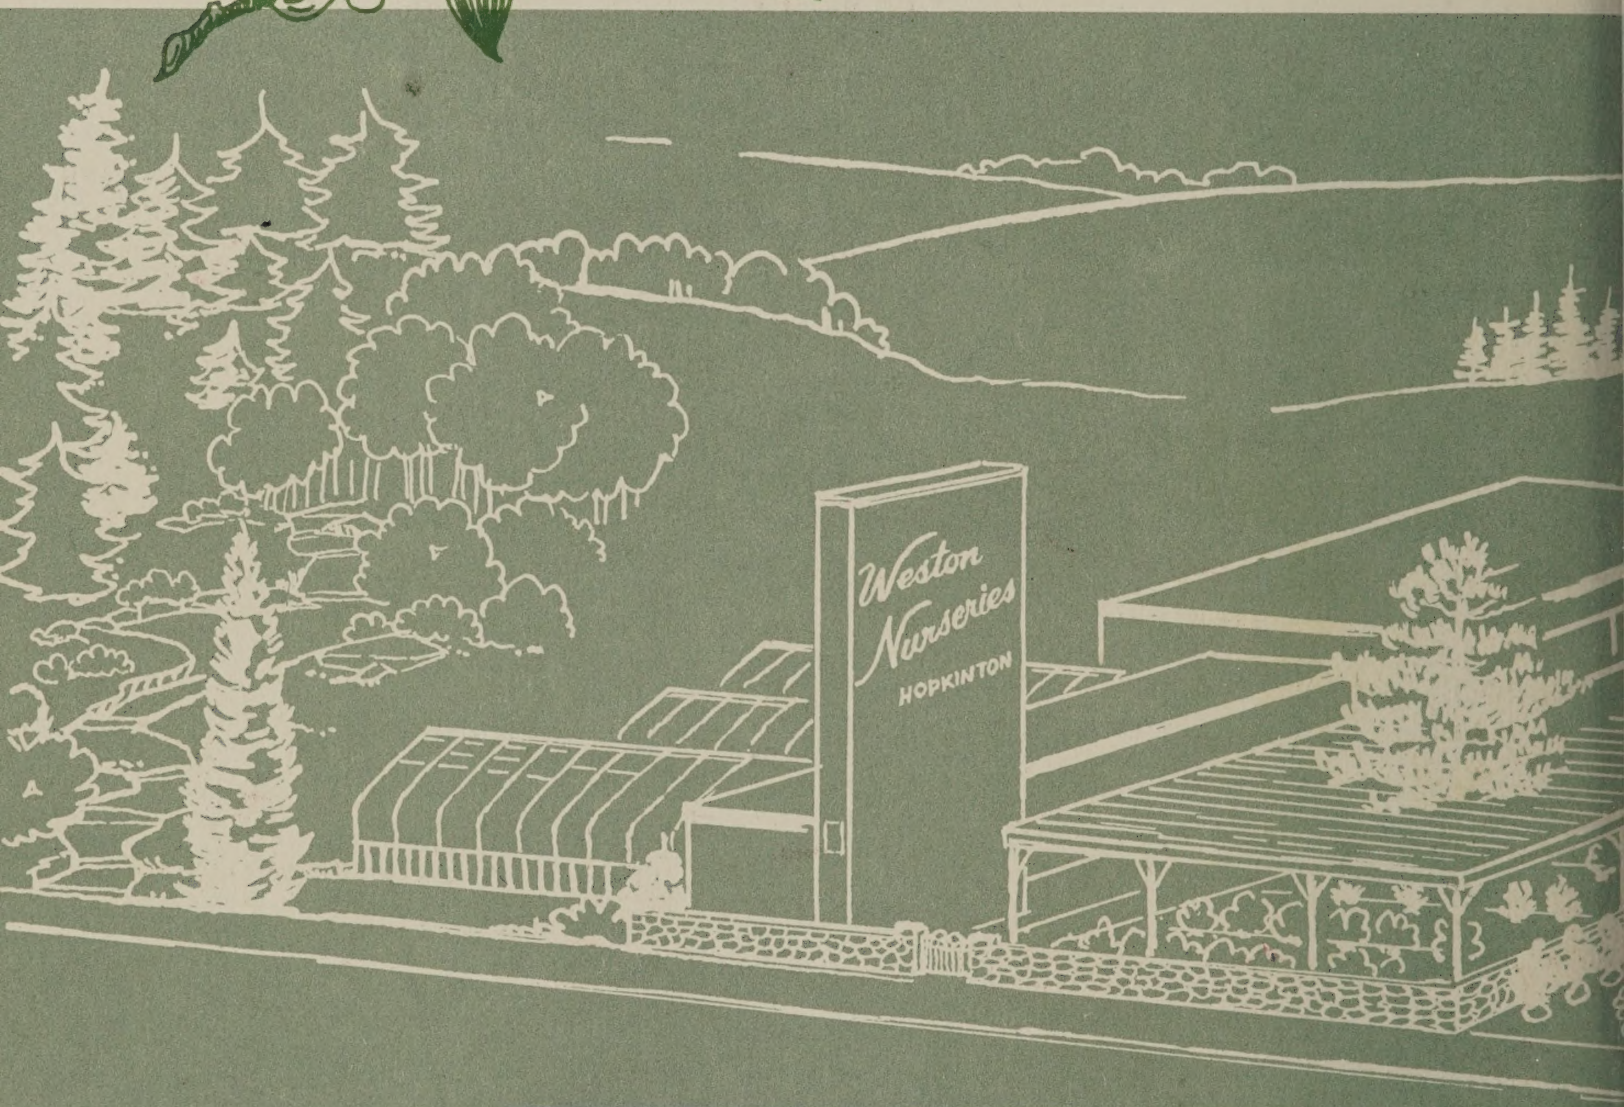

TO THOSE CUSTOMERS who feel the need of assistance in planting their homes, we would like to suggest that they bring a snapshot of the front, sides or rear of their home when coming out to the nursery. We are unable to send men out to see the grounds of our customers, but may be able to help here at the nursery in solving many problems if we can see the situation from blueprints, rough drawings, or snapshots.

Our experience in designing and planting thousands of homes perhaps quite similar to yours may be useful to you.

We will plant any material that we sell; but due to the need of our entire staff in the work of growing plants in our increasing acreage, we cannot do grading, lawn work, etc.

Plot your areas to be landscaped for a better-planned planting. Designate compass points.
